### Overview

**ABSTRACT**

The Karonga Health and Demographic Surveillance System (Karonga HDSS) in northern Malawi currently has a population of more than 38 000 individuals under continuous demographic surveillance since completion of a baseline census (2002-2004). The surveillance system collects data on vital events and migration for individuals and for households. It also provides data on cause-specific mortality obtained by verbal autopsy for all age groups, and estimates rates of disease for specific presentations via linkage to clinical facility data. The Karonga HDSS provides a structure for surveys of socio-economic status, HIV-prevalence and incidence, sexual behavior, fertility intentions and a sampling frame for other studies, as well as evaluating the impact of interventions, such as antiretroviral therapy and vaccination programs. Uniquely, it relies on a network of village informants to report vital events and household moves, and furthermore is linked to an archive of biological samples and data from population surveys and other studies dating back three decades.

## Coverage

---

**GEOGRAPHIC COVERAGE**

The Karonga HDSS surrounds the port village of Chilumba, on Lake Malawi, in the southern part of Karonga District. The surveillance area is located between latitudes 10.388 and 10.508S and longitudes 34.088 and 34.278E, covering an area of approximately 135 km<sup>2</sup>. The lake shore and the Nyika National Park form the boundaries to the east and west, respectively, whereas the boundaries to the north and south are delineated by village boundaries

**UNIVERSE**

The DSS covers all the individuals of all ages who are members of households and are residents within the geographical boundaries of the study area. Visitors too were captured in the baseline survey.

Of the 36,783 individuals under observation at the end of 2012, 48% (17,715/36,783) were male and 52% were female (19,068/36,783); 20% (7542/36,783) were aged under 5 years and 50% (18 396/ 36,783) were under 15 years of age. In all, 44% (16 277/36 783) of the population were aged between 15 and 59 years, and 6% (2160/36,783) were aged 60 years and above. The majority of the population under surveillance are rural dwellers that depend on subsistence farming and fish from the lake as a source of their livelihood.

## Sampling

### Sampling Procedure

---

The whole population

### Deviations from Sample Design

---

None

### Response Rate

---

The average response rate for household visits over all the rounds is around 99%

### Weighting

---

# Questionnaires

## Overview

---

The questionnaires are designed to capture the core HDSS information which includes the baseline, birth, immigration, outmigration and death along with the other questionnaires.

## **Data Processing**

### **Data Editing**

---

Data was left censored to 1 Jan 2003 to account for the start-up phase of the surveillance.

Data were edited to allow people to appear in only one household at a time (for surveillance purposes men with multiple wives can be recorded as living in more than one household).

### **Other Processing**

---

Data are entered manually from paper records onto an Access database. Data tables are extracted and processed in Stata prior to production of the core micro dataset.

## Data Appraisal

### Estimates of Sampling Error

Type: Continuous	Valid cases: 277338
Format: numeric	Invalid: 0
Decimals: 0	Minimum: 1
Range: 1-277338	Maximum: 277338
	Mean: 138669.5
	Standard deviation: 80060.7

**Description**

A sequential number uniquely identifying each record in the data file

**CountryId (CountryId)**

File: MW011.CMD2015.v1

**Overview**

Type: Discrete	Valid cases: 277338
Format: numeric	Invalid: 0
Decimals: 0	
Range: 454-454	

**Description**

ISO 3166-1 numeric code of the country in which the surveillance site is situated

**CentreId (CentreId)**

File: MW011.CMD2015.v1

**Overview**

Type: Discrete	Valid cases: 277338
Format: character	Invalid: 0
Width: 5	

**Description**

An identifier issued by INDEPTH to each member centre of the format CCNNS, Where CCNNS is the INDEPTH Member site code, constructed as follows:

- CC the ISO 3166-1 alpha-2 code of the country where the site is situated
- NN is a sequential number uniquely identifying an INDEPTH member centre within the country. Starting with 01 to 99, for a maximum of 99 centres per country
- S is a sequential character uniquely identifying the geographical surveillance site. Starting with 1 to 9, thereafter A to Z, for a maximum of 35 sites per centre.

Valid cases: 277338  
 Invalid: 0

**Description**

A code identifying the type of event that has occurred

**EventDate (EventDate)**

File: MW011.CMD2015.v1

**Overview**

Type: Discrete  
 Format: character

Valid cases: 277338

**Description**

The date on which the event occurred: Format YYYY-MM-DD

**ObservationDate (ObservationDate)**

File: MW011.CMD2015.v1

**Overview**

Type: Discrete  
 Format: character

Valid cases: 277338

**Description**

Date on which the event was observed (recorded), also known as surveillance visit date:  
 Format YYYY-MM-DD

**LocationId (LocationId)**

File: MW011.CMD2015.v1

**Overview**

Type: Continuous  
 Format: numeric  
 Decimals: 0

 Invalid: 0  
 Minimum: 1  
 Maximum: 19276  
 Mean: 9620.2  
 Standard deviation: 5562.6

**Description**

Unique identifier associated with a residential unit within the site and is the location where the individual was or became resident when the event occurred. For data anonymization purposes, this identifier should not be the same as the identifier used internally by the contributing centre, but the contributing centre should retain a mapping of this identifier to their internal location identifier

**MotherId (MotherId)**
